All About Animal Bones!: Zooarchaeology Program

Behind-the-scenes visit to a museum laboratory that works with archaeologists to identify the bones in their excavations. What do those bones tell us about what people ate, or what animals they hunted, and what animals lived around them.

Zooarchaeologists demonstrate how this is done using the skeletons of modern animals. If you have found a bone in your back yard, bring it with you and get it identified!

A favorite archaeology event for children.
